## PREFACE

---

THE following Tables will be found to be of great utility to many classes of business men, especially the farmer and miller. Every one at all acquainted with the business, must be aware that computing and paying for many hundred bushels of grain per day, purchased out of sleighs and wagons, would consume the entire time of a competent and accurate accountant, whereas by the use of these tables, the same amount of labor may be performed with the most unerring certainty, in a very few minutes. Besides, in the daily purchase of produce, the price is constantly changing, and the invariable occurrence of fractional parts of a bushel in each purchase, renders the most accurate and able person, in the hurry of business, liable to commit error. To obviate these difficulties, and expedite the computation of each purchase, as well as to give the most entire satisfaction to both buyer and seller, was the Author's aim in presenting to the public this little volume of ready-calculated tables.

A set of tables similar, in some respects, to these, were published in Rochester in the year 1831, by Wm. W. Allcott, an able and competent accountant,

but his computations being based upon prices in *shillings* and *pence*, were restricted in sales to this State alone. The general plan of this volume was suggested by the former, but the prices being based upon dollars and cents, the results of each computation are different. Hence, while *similarity* exists to a certain extent, *identity* does not.

It is believed that these tables, embracing as they do all the prices generally paid for grain in any market, are so happily adapted to the wants of the farmer and miller, that no one will presume to dispense with their use. Indeed, when they become known to the public generally, they will be used in all produce counting-houses, and by the sellers of grain, just as Interest Tables are now used by bankers and brokers.

The Tables on Scantling, Wood, Iron, Interest, &c., will render this little volume exceedingly convenient and useful to all who have occasion to transact business in either of those branches.

In conclusion, the Author will merely add a hope that this little volume will fully meet the expectations of those for whom it is principally intended to benefit, and that it will meet with their favor and patronage.

THE AUTHOR.

## EXPLANATION.

THE price per bushel will be found at the head of each page.

The *number of bushels and the number of pounds* will be found in the column headed *No.* The value of bushels will be found at the *left* hand of the number, and the value of pounds will be found at the *right* hand.

**EXAMPLE.**—Suppose you wish to know the value of 32 bushels and 38 pounds of wheat at \$1.42 per bushel. By referring to page 70, under the price \$1.42, and opposite the No. 32 you have \$45.44, then running down the same column of numbers till you come to 38, you have at the *right* \$0.90, which, added to \$45.44, makes \$46.34, the sum sought.

*Again.* What is the value of 36 bushels and 19 pounds of barley at 65 cents per bushel?

Look at the *left* of No. 36, under the price "65 cents per bushel," and you have \$23.40, and at the *right* of No. 19 you have 20 cents, which, added to \$23.40, makes \$23.60, the sum sought.

**NOTE.**—The value of pounds in these tables is computed at 60 pounds to the bushel. Consequently, for Barley, Rye, Corn, &c., you must add the following per cent. to the value in the tables.

For Corn *add*  $\frac{1}{3}$  of the value of the pounds to the answer in the table for the *true* answer for Corn.

For Rye, where Rye is measured at 56 lbs. per bushel, add  $\frac{1}{5}$  the same as before.

For Barley and Buckwheat, add  $\frac{1}{4}$  for the *true value*.

**EXPLANATION.**—Find the width of the load in the left-hand column of the table; then move to the right, on the *same line*, till you come under the height in *feet*, and you have the contents in feet: then move to the right, on the same line, till you come to the height in *inches*, and you will have the *additional* contents in feet for the height in inches. The *sum* of these two gives the true contents in feet. For loads 12 feet long, add one-half, and for 4 feet, subtract one-half.

*Example.*—If a load of wood be two feet 10 inches wide, and 3 feet 7 inches high, what are the contents? Against 2 feet 10 inches, and under 3 feet, stands 68; and under 7 inches, at the top, stands 13: then  $13+68=81$ , the true contents in feet.

**EXPLANATION.**—Find the number of feet in the left-hand column of the table; then the price at the top of the page, and trace the line and column until they meet, and you will find the amount in dollars and cents.

**Example.**—If a load of wood contain 98 feet, at two dollars and fifty cents per cord—first find the amount of 96 feet, which is \$1-88; and then add the value of 2 feet, (4 cents,) making \$1-92. So of all similar examples.

EXAMPLE.—What is the weight of a bar of rolled iron,  $1\frac{1}{4}$  inches diameter, and 1 foot in length?

In column second find  $1\frac{1}{4}$ , and opposite to it is 8128 pounds, which is 8 lbs. and  $\frac{128}{1000}$  of a lb. In the same way we may find the weight of any other diameter in the table.

# TABLE IX.

## TABLES OF INTEREST.

### EXPLANATION.

THE principal, beginning at \$1, and proceeding to the highest sum in the tables, will, in all cases, be found at the head of the page. The *time*, for which the interest on any given amount may be sought, will be found in the left-hand column of the tables, from 1 day to 1 year; that is to say, from 1 to 20 days, in regular succession—then passing to a month, and then proceeding down to 12 months. The interest required for the given time on the given principal, will be found against the time contained in the tables, and directly under the principal. So we have, on the same page, the interest on the sum required for years, months, and days, for any period of time from 1 day to 1 year. If the interest on any given principal be required for a longer period of time than for which any provision has been made in these tables, we have only to double the amount of interest shown for half that time. Thus, if the interest on \$28 be required for 2 years and 8 months, the tables show the interest for 1 year and 4 months to be \$2.24; consequently, twice that amount will be the interest sought. If the interest on months and days be required, add the interest for the given months and days together; and, in like manner, for the years, months, and days.
